

Service Statement

Muhammad Asif Khan, Ph.D.
<https://muasifk.github.io/>

Throughout my career, I have actively engaged in service to the research community and my professional environment, contributing to its development and fostering collaboration among peers. These experiences have significantly shaped my understanding of mentoring, service, and leadership, which I aim to bring to the faculty position at your institution.

In my past roles, I have volunteered for various research community activities, including serving as a reviewer and editorial contributor for journals and conferences. I have served on the editorial boards as associate editor of three IEEE transactions including TNNLS, TCE, and TTS. In addition to editorial roles, I have served as a reviewer for all major IEEE transactions and journals including TAI, TCE, TETC, SMC, TNNLS, TCSVT, TDSC, COMST, COMMAG, WCM, WCL, IOT, IOTMAG, NL, OJVT, TVT, OJCOMS, and ISJ.

I have also acted as a co-chair of several committees at international conferences, served as a member of technical committees, and participated in organizing events that promote knowledge exchange and professional networking. I also served as a TPC member of numerous prestigious conferences including NeuroIPS, ICC, Globecom, CCNC, VTC, ICCE, BigData, Sensors, GEM, etc. These opportunities allowed me to provide constructive feedback to authors, ensure the smooth functioning of academic events, and collaborate with researchers worldwide.

At the institutional level, I have contributed to internal services at university and research labs. This includes organizing seminars (QU), mentoring junior researchers (QMIC, QUYS), participating in departmental initiatives (QU), and contributing to strategy discussions that align with organizational goals (QU, QMIC). These experiences have deepened my appreciation for collective growth and the importance of academic citizenship.

Looking forward, I plan to actively participate in service work at your institution by engaging in departmental and university-level committees, mentoring graduate and undergraduate students, and contributing to diversity and inclusion initiatives. I am particularly enthusiastic about organizing workshops and events that bridge academia and industry, fostering interdisciplinary collaboration. At the broader research community level, I aim to continue volunteering for paper reviews, editorial boards, and conference organizing committees, while exploring leadership roles in professional societies.

Through these activities, I hope to support the institution's mission and contribute to advancing the field. I am confident that my commitment to service, coupled with my past experience, will enable me to foster a supportive and inclusive academic environment while strengthening engagement with the global research community.
